Please join the following documents

The vehicle's manual containing technical information, the paper of Mines (if it is a French vehicle), the foreign registration card, the technical information of constructor, etc.

Remark :

Information requested above can be found : on the vehicle's identification tag, on the foreign registration card, in the vehicle's utilization manual, in the exhaust-gas service document. If the above information cannot be obtained, please contact one dealer or the importer of the brand or the manufacturer.

For vehicles from the USA,, it is needful to provide:

- the photo of the antipollution label, generally located in the engine compartment and is usually named "Vehicle emission control information" or "Important vehicle information". On this label, you will find the constructor's name, the engine's specification, a few engine's data and the exhaust-gas prescriptions.
- the photo of the vehicle's manufacturer plaque, generally fixed on the lefthand front door frame.

Kilometers :

For your information, the art. 30 al. 1 bis of the OETV (technical law in Switzerland) allows an identification control instead of an individual control for the first registration of the new M1 category vehicles (passenger cars), total weight of which does not exceed 3.5 tons. These vehicles must benefit from the european conformity certificate (COC) or Swiss type approval if the vehicles have been imported or built in Switzerland less than a year before and if their mileage does not exceed 2000 km when controlled.

The controlling time and the taxes depend on an identification control and an individual control.
