# BEGINNING INVENTORY

Beginning: \_\_\_\_\_

Inventory at the start and at the close of the project is a necessary part of the record keeping process. The starting inventory is simply a listing of all things which are on hand at the start of the project (animals and equipment) together with their value. The closing inventory serves the same purpose - a listing of items on hand at the close of the project together with their value. Inventory items bought after the project starts will be entered as expenses to the project and in the closing inventory. Beginning inventory values are either: (1) the amount paid or (2) in those cases where stock or feed was not purchased but was already on hand - the estimated market value. The closing inventory value is the estimated market value. The closing inventory for the year just completed should be the same as the beginning inventory for the new year. Last year's closing inventory information may be transferred to the new project sheet and used as this year's beginning inventory.
