## PREFACE

Agriculture plays an important role in a most developed State like Haryana. Consequently, the consumption pattern of cultivators determines the growth of economy of the State. The Study on “Family Budget of Cultivators in Haryana” analyses the household income from different sources, household expenditure and consumption pattern of 119 selected households.

The study indicates an average annual income per household of ₹308030 and expenditure 242221 leaving an annual surplus of ₹ 65809 during 2010- 2011. The main source of household income was from farm cultivation which contributed 56.16% of the household income. A major portion i.e. 50.62% of the total expenditure was incurred on food items whereas the remaining 49.38% accounted for non-food items.

The report has been prepared by Sh. Jagdish Chander, Research Officer with the assistance of Sh. Navdeep, Asstt. Research Officer, Smt. Manju, Field Assistant (on Contract) & Smt. Kamlesh ,Sr. Scale Stenographer, under the supervision of Sh. J.S. Dalal Deputy Director, Deptt. of Economic & Statistical Analysis. Useful work done by them for bringing out the report is acknowledged. Efforts have been made to improve the quality of the report. Suggestions for further improvement are most welcome.

I hope, this report will prove useful to planners, policy makers, sociologists and administrators who are interested in socio-economic development of the cultivators.

I am thankful to all the selected cultivators of Haryana for maintaining the requisite information. The cooperation extended by the District Statistical Officers in furnishing the basic data and scrutiny of cultivator records for finalising the study is greatfully acknowledged .

In Haryana” for the year 2010-11**

## CHAPTER -I

### INTRODUCTION

#### **General**

The study on “Family Budget of Cultivators” in Haryana has been undertaken by selecting 119 cultivator households in the state. The period of study is agriculture year 2010-11 i.e. from July 2010 to June 2011. The study aims at analysing sources of income and expenditure of the cultivators. An attempt has been made to find out the sources of income, pattern of domestic expenditure, dietary habits, standard of living and proportion of consumption of goods produced at farm and purchased from outside.

#### **1.1 Objectives of the Study**

The objectives of the study are as under:-

- i) To find out the extent of contribution by different sources to household income
- ii) To study the pattern of their domestic expenditure.
- iii) To find out the proportion of consumption of goods produced at farm and of those procured from outside.
- iv) To examine the dietary habits of cultivators and their overall standard of living.
- v) To study the impact of the size of holdings on income and expenditure.

#### **1.2 Methodology**

For the main study i.e. "Economics of Farming in Haryana", 238 holdings were selected from different agro-climatic zones of the state, keeping in view the size of holdings, willingness and capability of the cultivators in maintaining the day-to-day record of their income and domestic expenditure in the prescribed format, 119 out of 238 households were selected for conducting the study on "Family Budget of cultivators in Haryana". The results extracted in this study are purely indicative in nature because of the small sample size.

The data is collected from selected cultivators through District Statistical Officers. The selected cultivators were imparted necessary training and ₹500/- per annum was given to them as an honorarium for recording the data on income and expenditure of the household in the prescribed schedules. The timely supervision was done by the staff of Headquarter and District Statistical Offices to ensure proper recording and accuracy of data.

## **CHAPTER-II**

### **Sources of Income of Cultivators**

#### **General**

Introduction of improved technology in the field of agriculture has encouraged the cultivators in the State to adopt latest farm practices, thus enabling them to increase their farm yield per hectare as well as income. To increase their earnings, the cultivators have also diversified their economic activities into dairy farming, poultry and other small enterprises.

#### **2.1 Household size**

The size of the family is ranged from 6 to 8 members. However, the average size of family was 7. This simple average does not provide a true picture of household size in terms of consumption as it gives equal weight to the Children and Women. Therefore, the Atwator's scale of Adult Male Unit (Appendix –II) has been applied to work out the true family size of the cultivators. Children and Women do not equalize male adult and are, therefore, to be converted to adult male units in order to ascertain their real capacity to earn and spend. This Conversion is universally applied in National Sample Survey and other allied surveys conducted through out the country. According to the "Atwator's Scale of Adult Male Unit of the Chinese Farm Economy by Buck", the average size of family worked out to 5. The selected households members and adult male units have also been classified according to size of holding in table 2.1.

**Table 2.1 Number of households and household members according to size of holdings**

Sr.No	Size of Holdings (Hectares)	Total number of Households	Members	Average no. of Adult male unit	Average no. of adult male unit per household	
1	2	3	4	5	6	7
1.	Below 2.0	37	227	179.60	6.14	4.85
2.	2.0-4.0	53	350	286.40	6.60	5.40
3.	4.0-7.5	23	163	138.60	7.09	6.03
4.	7.5-10.0	5	42	36.10	8.40	7.22
5.	10.0 & Above	1	8	7.10	8.00	7.10
Total		119	790	647.80	6.64	5.44

The above table shows that average no. of members per household of 119 selected families was 7. The maximum average household size of 8 members was observed in the households belonging the holding size group of 7.5 - 10.0 and 10.0 & above hectares whereas it was minimum of 6 members in the household pertaining to holding size group of below 2.0 hectares. The size of holdings i.e. 7.5 -10.0 and 10 & above hectares have more household size to the average household size while other size of holdings have less than the average household size.

## 2.2 Sources of income

The income of cultivators have been classified into following four broad categories:-

- i) Farm cultivation.
- ii) Milk and milk products.
- iii) Interest on capital investment (It includes farm equipments and machinery, farm and residential buildings, milch animals and durable household goods).
- iv) Income from miscellaneous sources such as rent received from leased out land, remittances received from outside, imputed value of fuel, wood and dung cakes, sale of farm yard manure and income from sources other than farm cultivation, etc.

### 2.3 Net Income of selected cultivators

The source-wise average annual net income per household, per capita and per adult male unit is presented in Table 2.3.

**Table 2.3 Net Income of selected cultivators**

Total		36655615 (100.00)	308030	46400	56585

Note: Figures in brackets indicate the percentages to the total.

It is observed from the above table that the main source of income of farming families during 2010-2011 was farm cultivation which accounted for 56.16% of their total income. The contribution of the other three sources i.e. (i) milk and milk products (ii) capital investment and (iii) Miscellaneous was 6.10%, 14.74%, and 23.00% respectively. The average annual income per family, per capita and per adult male unit during 2010-2011 has been worked out to ₹308030, ₹46400 and ₹56585 respectively.

### 2.4 Net Income from farm cultivation

The net income from farm cultivation has been worked out after taking into account gross income and the expenditure on various items of input like hired manual labour, bullock labour, seeds, fertilizers, implements/machinery and tubewells/pumping sets etc. Table 2.4 gives in brief the gross income, total expenditure and net income of selected cultivators.

**Table 2.4 Income from farm cultivation**

3.	Net Income	20586166	172993	26058	31779

It has been observed that the average farm income per household, per capita and per adult male unit was worked out to ₹172993, ₹26058 and ₹31779 per annum, respectively.

#### **2.4 (a) Income from farm cultivation and size of holdings**

In order to assess the impact of size of holdings on the annual farm income of a household, the size-wise average income per household, per capita and per adult male unit have been worked out. The details in this regard is presented in Table 2.4 (a).

**Table 2.4 (a)Income from farm cultivation (Size-wise)**

(In ₹)

Size of holdings (Hectares)	Total farm income	Average income per

Total	20586166	172993	26058	31779

The above table depicts that the minimum average income per household from farm cultivation for the households belonging to the holding size group of below 2.0 hectares was ₹74369 whereas the maximum average income was recorded ₹675456 in the size group of 10.0 & above hectares. The average per capita income was ₹12122 which is lowest

in the size group of below 2.0 hectares and it was highest ₹84432 in the size group of 10.0 and above hectares.

### **2.5 Income from milch animals and milk products**

The net income of all the selected households from milk and milk products and milch animals was worked out to ₹2235397 during agricultural year 2010.11. The following table indicates the total number of milch animals owned, milk produced and the income accrued therein.

**Table 2.5 Average number of milch animals owned, milk produced and income accrued.**

Sr.No.	Item	Cows	Buffaloes	Cows and Buffaloes	Without Milch Animals	Total

8.	Net income per household (₹)	15452	18027	33281	-	18785

The above table shows that the cultivators normally prefer to keep buffaloes for milk production because they yield more milk as compared to cows. The cows were mainly kept for the purpose of supplying male calves to be ultimately used as bullocks in the fields. The annual milk production of all 186 milch animals possessed by 119 households was 3138.79 Qtls. worth ₹8414812 and the milk produced per annum per family was 26.38 Qtls. The net

income per household from milch animals after meeting out all the maintenance expenditure on milch animals was ₹18785.

### **2.5 (a) Income from milk production**

The total income from milk production of all the selected households has further been classified according to size of holdings to find out the correlation between the income from milk production and the size of holding pertaining to a household in the following Table:-

The average income from milk production per household, per capita and per adult male unit has been worked out ₹18758, ₹2830 and ₹3451, respectively during the year 2010-11.

### **2.6 Income from capital investment**

14.74% of the annual income of the selected households accrued from capital investment . The imputed income by way of interest @ 9% per annum from capital investment on items such as milch and drought animals, farm equipment and machinery, farm and residential buildings, cattlesheds, wells, tubewells & pumping sets, and durable goods is given in table 2.6.

	Total	8430183 (100.00)	70842

Table 2.7 indicates that the total income of all the selected households from miscellaneous sources amounted to ₹8430183. An average annual income of a family from this source was ₹70842. The highest contribution of 59.51% came from remittances received from outside followed by 20.27% from pension, 3.20% from rent ,2.77% from fuel, and 1.76 % from family labour etc. The remaining contribution of 12.49% was from, manure, honorarium for keeping records of farm accounts and family budgets etc.

### **2.7 (a)    Income from miscellaneous sources according to size of holdings**

In order to study the effect of size of holdings of a household on its income from miscellaneous sources, the total income from this source has further been classified in table 2.7 (a).

**Table 2.7 (a) Income from miscellaneous sources (size-wise)**

Total	8430183	70842	10671	13014	

The above table depicts that the highest average income of ₹111650 per household from miscellaneous sources was observed in the size group of 10.0 & above hectares whereas it was lowest of ₹6800 in the holding size group of 7.5 -10.0 hectares . However, the average income per household, per capita and per adult male unit worked out to ₹70842, ₹10671 and ₹13014 , respectively. There is no correlation between the size of holdings and average income per household, capita and adult male unit in case of miscellaneous.

## 2.8 Income of cultivators according to size of holdings from all sources

It is observed that the size of holdings has a significant effect on the income of the cultivators. Generally, the average income of cultivators increases due to increase in the size of holdings because farmers with large holdings follow better agricultural practices and can afford a better package of inputs. The details of income of cultivators according to size of holdings is given in Table 2.8.

**Table 2.8 Income of cultivators according to size of holdings from all sources

The cost of milk production per quintal both for buffaloes and cows has been worked out by taking into account the various variable and fixed costs. Variable cost includes expenditure on items such as fodder, concentrates, labour ( family and hired) medical care, etc. and fixed cost includes interest and depreciation on capital investment made on milch animals and cattlesheds etc.

The cost per quintal and quantity of milk produced is given in the following table:-
