C. Index Description**The S&P 500[®] Low Volatility Index**

HSBC has derived all information relating to the Index, including, without limitation, its make-up, performance, method of calculation and changes in its components, from publicly available sources. That information reflects the policies of and is subject to change by, Standard & Poor's Financial Services LLC ("S&P"). S&P is under no obligation to continue to publish and may discontinue or suspend the publication of the Index at any time.

The Index has been calculated since April 20, 2011 and measures the performance of the 100 least volatile stocks in the S&P 500[®] Index. Volatility is defined as the standard deviation of the stock's daily price returns over the prior 252 trading days. Constituents are weighted relative to the inverse of their corresponding volatility, with the least volatile stocks receiving the highest weights. The Index is designed to serve as a benchmark for low volatility or low variance strategies in the U.S. stock market and S&P may from time to time, in its sole discretion, add companies to or delete companies from, the Index to achieve these objectives. Changes in the Index are reported daily in the financial pages of many major newspapers and on the S&P website (www.standardandpoors.com). Information contained in the S&P website is not incorporated by reference in, and should not be considered a part of, this document.

The Index does not reflect the payment of dividends on the stocks included in the Index and therefore the return, if any, on this HSBC Stock Market GIC will not produce the same return you would receive if you were able to purchase such underlying stocks and hold them until the Maturity Date. In addition, past performance of the Index is not an indication of future results.
