PUBLIC PERCEPTIONS ON MUSLIMS IN THE PHILIPPINES November 2006

I. INTRODUCTION

This study seeks to validate the findings of the March 2005 survey on Filipino perceptions of Muslims which Pulse Asia, Inc. undertook for the Philippine Human Development Network. The March 2005 survey provided quantitative support for allegations of discrimination against Muslims in employment and in business transactions. It, moreover, pinpointed broad areas in the country where anti-Muslim bias is apparently stronger and provided a profile of the Filipino with a tendency to such bias.

Following the March 2005 study, the probes on perceptions of Muslims are incorporated as a module in Pulse Asia's November 2006 *Ulat ng Bayan* Survey. Many of the questions were modified or refined to improve the quality of responses. This section describes the sampling and refinement of questions.

A. Sampling

The November 2006 *Ulat ng Bayan* Survey is a stratified random sample of 1,200 Filipino adults who were interviewed face-to-face survey during the period October 21 – November 8, 2005. [See Technical Details in Annex B for further information.]. Respondents from three barangays in Sulu were not included in the survey. As a result, there are only 1,185 respondents for the Muslim probes. Of these 1,185 respondents, 19 are Muslims. They are found in barangays that are not predominantly Muslim. They constitute about 1.6% of the respondent sample for the Muslim module.

B. Questionnaire

There are sixteen (16) questions on Muslim concerns in the Pulse Asia November 2006 *Ulat ng Bayan* survey (see Annex A). Questions that were retained from the March 2005 survey include the four 'proximity' questions (i.e., whether the respondent is willing to have a male Muslim for a boarder in his/her home, hire a female Muslim for domestic helper, hire a male Muslim as worker, or live near a Muslim community), the question on source of information on Muslims, and that on group associated by the respondent with the word 'terrorism' (unaided recall). However, this last question was placed ahead of the module on Muslim concerns.

Five questions deal with perceived personal traits of Muslims. Four of the five traits were also probed in the March 2005 survey – industry, honesty, trustworthiness, and close-mindedness or fanaticism. Humility / arrogance is probed in lieu of peaceful disposition, which was covered in March 2005. To avoid 'Can't say' responses, the questions on personal traits were presented differently, and a different answer grid was employed. In March 2005, for example, the probe on trustworthiness was presented as follows:

Alin sa mga sumusunod ang pinakaangkop na naglalarawan sa mga Filipinong Muslim sa pangkalahatan?

(Which of the following appropriately generally describes Filipino Muslims?)

SHOWCARDS

TALAGANG MAPAGKAKATIWALAAN (<i>Very trustworthy</i>)	5
MEDYO MAPAGKAKATIWALAAN (<i>Somewhat trustworthy</i>)	4
HINDI MASABI KUNG MAPAGKAKATIWALAAN O HINDI MAPAGKAKATIWALAAN (<i>Cant say if trustworthy or untrustworthy</i>)	3
MEDYO HINDI MAPAGKAKATIWALAAN (<i>Somewhat untrustworthy</i>)	2
TALAGANG HINDI MAPAGKAKATIWALAAN (<i>Very untrustworthy</i>).....	1

In the November 2006 survey, the probe took the following form:

(SHUFFLE CARDS – RATING BOARD 5) SPLIT SAMPLE	PROBABLY TRUE	PROBABLY FALSE	DON'T KNOW	REF
a. KARAMIHAN NG MGA MUSLIM AY HINDI MAPAGKAKATIWALAAN <i>(Most Muslims are untrustworthy)</i>	1	2	8	9
b. KARAMIHAN NG MGA MUSLIM AY MAPAGKAKATIWALAAN <i>(Most Muslims are trustworthy)</i>	1	2	8	9

As in the 2005 survey, four questions on stereotypes (propensity to running amok, hatred of non-Muslims, being terrorists or extremists, and oppression of Muslim women) are asked. A fifth question covered in the 2005 survey, as to whether Muslims in the country regard themselves as Filipinos, is excluded. The 2006 stereotype questions use the same answer grid as in 2005, but are presented in a different format. These now follow the format of the probes on personal traits (split-sample approach) and use softer phrasing.

The sixteenth question is a probe on the strategy the respondent thinks that government must pursue to achieve lasting peace in Mindanao.

II. FINDINGS

A. Sources of information about Muslims

The results on source of Filipinos' information on Muslims are essentially unchanged since March 2005, except for the lower percentage citing radio as their source. Television continues to be the main source of information (78% citing) followed by radio (37%, down from 44% in March 2005) and newspapers (23%). About a fifth of Filipinos (22%) cites friends as source of information. Only 19% cite their own experience with Muslims, which is essentially the same as the 14% figure recorded in March 2005. [See Table 1].

Question: Alin po sa mga sumusunod ang pinagmumulan ng inyong impormasyon tungkol sa mga Filipinong Muslim?
 Maaari kayong pumili ng kahit ilan?

As in the previous survey, television is cited by higher percentages of NCR adults than their Mindanao counterparts (89% vs 60%), by the ABC than by the E (88% vs 71%), and by those with at least some units in college those with at most an elementary education (86% vs 61%). A sizeable number of Mindanaoans (40% to 41%) have friends or their own experience as source. On the other hand, majority of the Visayans (68%) cite radio, while a sizeable percentage of those from NCR cite newspapers (41%) as well. Visayans are the second largest group that cites friends as source of information (27%), but are the least likely to cite own experience (4%).

B. Groups associated with terrorism

The question on group associated with Muslims was asked of all respondents, including those in the three sample barangays in Sulu.

Fewer Filipinos associate the word “terrorism” with Muslims (down to 9% from 27%) [See Table 3.]. This decline is due to the change in position of the question.

As in the March 2005 survey, about a third of Filipinos (35%) associate the Abu Sayyaf with terrorism, with a slightly larger percentage of those in NCR (47%) and those in urban areas (42% vs 27% for rural) doing so. One in four Filipinos (25%) cannot or refuse to name a group they associate with terrorism, with more in the rural than in the urban areas (36% vs 14%) unable or unwilling to do so.

Q. Anong grupo ang unang pumapasok sa inyong isipan kapag narinig ninyo ang salitang TERORISMO? ONE ANSWER ONLY

About half of the 32 respondents whose religion is Islam likewise associate the Abu Sayyaf with terrorism, and about a third are unable or refuse to cite any group [Table 4].

Table 4. Group Associated with Terrorism BY 32 Respondents
 Whose Religion is Islam

GROUP	PERCENT (%) CITING
Abu Sayyaf	51
Jemaiah Islamiyah	5
Muslims (Bin Laden)	8
Al Qaeda	3
Don't Know	23
None	12

C. Proximity to Muslims

When asked to choose between two persons described to be alike in all other respects, but with one having a Christian name and the other having a Muslim-sounding name, majority of Filipinos (54% to 57%) choose the person with the Christian name (male boarder - 57%, female domestic helper - 54%, male worker - 57%). The percentages citing the Christian name are essentially the same across geographic and socio-demographic groupings. [See Table 5.]

Question: Halimbawa ay may dalawang binatang aplikante para sa isang posisyon sa fast food restaurant. Pareho silang nakapagtapos ng 3rd year college, parehong kwalipikado, at parehong nagbabalak magtrabaho para makaipon ng pang matrikula. Kung kayo ang mamimili, sino sa kanila ang inyong pipiliin?

Question: Halimbawa ay nangangailangan ang pamilya ninyo ng isang lugar na titirhan at nakakita kayo ng dalawang posibleng mauupahan. Pareho ang kanilang sukat, bilang ng kwarto at distansya sa inyong pinagtatrabahuhan at eskwelahan ng mga bata. Higit na mura ang upa ng isa ngunit mas malapit sa komunidad ng mga Muslim. Alin sa dalawa ang inyong pipiliin?

Preference for the Christian-sounding name is higher by 10 to 15 percentage points over the corresponding March 2005 levels, as fewer respondents now cite that either the person with the Christian-sounding name or the Muslim-sounding name will do. An estimated 40% of Filipino adults choose the Christian-sounding name in all three instances, an increase of 10 percentage points over the March 2005 figure. In the meantime, the percentages citing the Muslim-sounding name remain at single-digit levels (6% to 9%).

Compared to the previous survey, more of those from NCR and Balance Luzon and from socioeconomic classes D and E now opt for the Christian-sounding name. In March 2005, those from Luzon were the most indifferent to choosing between a Muslim-sounding and a Christian-sounding name. This is no longer the case.

When it comes to choosing between a residence with cheaper rent but located near a Muslim community and a residence with higher rent but far from a Muslim community, 69% of adult Filipinos choose the latter. This corresponds to an increase of 29 percentage points over the March 2005 level, with only 9% now saying that they will choose the residence with lower rent (down from 37% in March 2005). Capacity to pay no longer appears to be an issue in the current survey, in contrast to the 2005 survey, as even those in the poorest socioeconomic class now choose the residence with higher rent.

As in the 2005 survey, about one in five (19%) indicates that either option will do.

An estimated 34% of Filipino adults will choose the Christian-sounding name in every instance and the residence which has higher rent but is far from a Muslim community.

D. Perceived Personal Traits of Muslims

Rephrasing the question on personal traits of Muslim Filipinos and changing the answer grid appear to have elicited sharper responses. In the 2005 survey, majority of the respondents (56% to 64%) indicated indecision regarding the personal traits that best describe Muslims. In the current survey, greater percentages of Filipinos are inclined to think that most Muslims are industrious (60%), not arrogant (52%), and honest (49%) than think the opposite. The percentages inclined to believe that most Muslims are lazy, arrogant or dishonest lie in the 31% to 41% range. However, the same number of Filipinos are inclined to believe that most Muslims are untrustworthy as are inclined to believe that they are trustworthy (both at 44%). In addition, essentially the same number tend to think most Muslims are open-minded (47%) as think they are close-minded. [See Table 6.]

Visayans and Mindanaoans, particularly the former, tend to have a more negative view of Muslims than those from NCR and Balance Luzon. From 45% to 58% of Visayans tend to think that most Muslim Filipinos possess the negative attribute. The corresponding ranges for Mindanaoans, those from Balance Luzon and Metro Manilans are 44% to 49%, 20% to 37% and 24% to 36%, respectively. However, from 14% to 21% of Metro Manilans and from 9% to 13% of those from Balance Luzon and said they did not know or refused to answer the probes on personal traits. 'Don't know' responses and refusals did not exceed 7% in either the Visayas or Mindanao.

Q160. Karamihan ng mga Muslim ay manloloko

Q161. Karamihan ng mga Muslim ay hindi mapagkakatiwalaan

Q162. Karamihan ng mga Muslim ay sarado ang isip

E. Muslim stereotypes

About half of Filipinos tend to think that Muslims are not likely to be terrorists or extremists (51%), and a majority believes that Filipino Muslim women are not oppressed (59%). However, about half are inclined to think that Muslims are more prone to run amok (51%), while large pluralities believe that most Muslims secretly hate all non-Muslims (49%) and that they likely are terrorists or extremists (42%). [See Tables 7 and 8].

Question: Ang mga Muslim ay mas madaling maghuramentado

The results on the probe on propensity to run amok are essentially unchanged since March 2005, except for the decline in percentage of Visayans who now hold this view (from 71% in March 2005 to 58%).

As in the case of personal traits, Visayans and Mindanaoans tend to have a more negative view of Muslims. More of them (51% to 61%) subscribe to the negative stereotypes on running amok, secret hatred of all non-Muslims and being terrorists or extremists than do not. In contrast, more of Metro Manilans and those from Balance Luzon are disinclined to view Muslims as terrorists or extremists than do so. But about the same number of Metro Manilans and those from Balance Luzon view Muslims as prone to run amok or to secretly hate all non-Muslims as do not.

III. ANTI-MUSLIM BIAS INDICES

Given the huge indecision levels of the responses to the questions on personal traits, these responses were excluded from the construction of the anti-Muslim bias indices. Only the responses to the proximity and stereotype probes were included.

A. Description of the indices

Following the March 2005 study, three anti-Muslim bias indices are considered. The first, called the 'proximity'-based index, is based on the responses to the 'proximity' questions. A respondent is assigned a point for each Christian name chosen or for choosing the residence that is far from a Muslim community. Respondents who obtain at least three points (out of a possible total of four) are tagged as having anti-Muslim bias.

The second index is based on the responses to the probes on personal traits and stereotypes. A respondent is assigned a point for each negative trait or stereotype chosen. Respondents who obtain at least five points (out of a possible total of nine) are tagged as having anti-Muslim bias.

The third index is based on the information used in the first two indices. A respondent obtaining at least seven points (out of a possible total of thirteen) based on the combined proximity, traits and stereotype questions is tagged as having anti-Muslim bias.

B. Profile of those with anti-Muslim bias

Results for the three indices indicate that from 42% to 54% of Filipino adults have anti-Muslim bias, depending on the index used, with larger percentages of Visayans and Mindanaoans (56% and 49%, respectively) exhibiting bias based on personal traits and stereotypes [Table 9]. Survey-weighted logistic regressions indicate further that urban Visayans in particular, followed by rural Visayans and rural Mindanaoans are more likely to have stereotype-bias [Table 10]. In addition, all things equal, those whose source of information on Muslims is

the radio are also more likely to subscribe to the negative stereotypes. On the other hand, the finding that those aged 55 to 64 years are less likely to have stereotype bias could be a peculiarity of this particular sample. Findings from the March 2005 sample indicated increasing stereotype bias with increasing age, although the 2005 index for stereotype bias did not take into account personal traits.

Radio is source of information	1.5
Aged 55 to 64 years	0.4
Correct classification rate =60% Sensitivity rate = 57% Specificity rate = 63%	

¹ level of significance = 0.08

Survey-weighted logistic regressions further indicate that stereotype bias by itself does not sufficiently explain proximity bias [Table 11]. Proximity bias increases with increasing age, and experience with Muslims apparently lessens the likelihood of proximity bias, all things equal. The results also indicate that NCR residents and those from Pangasinan are more likely to have proximity bias, while the Warays and government employees are less likely to be so.

Table 11. Estimated Odds Ratios for Survey-weighted Logistic Regression of Proximity Bias¹

CHARACTERISTIC	ESTIMATED ODDS RATIO OF BEING BIASED
Speaks Pangasinan dialect	5.3
Has stereotype bias	1.6
From NCR	1.5

Correct classification rate =58% Sensitivity rate = 57% Specificity rate = 59%	

¹ level of significance = 0.15

² Actual age in years

To determine which perceived traits or stereotypes of Muslims contribute to proximity bias, indicator variables of the individual traits and stereotypes are included in the survey-weighted logistic regression on proximity bias. The results indicate that it is primarily the perception of untrustworthiness that fuels proximity bias [Table 12].

Table 12. Estimated Odds Ratios for Survey-weighted Logistic Regression of Proximity Bias¹

¹ level of significance = 0.04

D. Anti-Muslim bias and solutions to achieve lasting peace in Mindanao

When asked to choose two strategies that they believe government should pursue to achieve lasting peace in Mindanao, majority of Filipinos (57%) cited addressing poverty in Mindanao. Large pluralities (46% and 49%) also chose the conduct of dialogues among parties affected by the conflict and the declaration of an immediate ceasefire. Only 30% chose the military option wherein government forces pursue the rebels until they are completely wiped out or are weakened. [See Table 14.]

Table 14
GOVERNMENT ACTION TO ACHIEVE PEACE IN MINDANAO

Government should declare an immediate ceasefire whether the rebels agree or not	49	50	45	53	50	34	51	48
Continue the dialogues between the different parties affected by the Mindanao conflict	46	50	48	44	43	50	51	38
Government forces should pursue the rebels until they are completely wiped out or weakened	30	24	28	32	36	25	28	35

Q165. Sa inyong palagay, ano ang pinakamainam na gawin ng pamahalaan upang magkaroon ng pangmatagalang kapayapaan sa Mindanao? Pumili ng dalawang aksyon lamang.

Metro Manilans (65%) and those from urban areas (64%) tend to cite the poverty solution more often than those from Balance Luzon and the rural areas (both at 50%). Members of class E are more likely to cite addressing poverty (59%) than continuing dialogues (38%). In addition, preference for the dialogue option appears to increase with educational attainment and socioeconomic class. [See Table 15.]

Q165. Sa inyong palagay, ano ang pinakamainam na gawin ng pamahalaan upang magkaroon ng pangmatagalang kapayapaan sa Mindanao? Pumili ng dalawang aksyon lamang.

Anti-Muslim bias appears to explain, in part, preference for a military solution to achieve lasting peace in Mindanao [Table 16]. Cebuanos and those whose source of information on Muslims is the radio also appear to be more likely to cite the military solution.

Table 16. Estimated Odds Ratios for Survey-weighted Logistic Regression of Preference for Military Solution¹

With proximity bias	1.7
Cebuano	1.7
With stereotype bias	1.5
Radio is source of information	1.3
Correct classification rate = 62% Sensitivity rate = 62% Specificity rate = 62%	

¹ level of significance = 0.16

E. Anti-Muslim bias in 2005 and 2006

Strictly speaking, the current bias index based on the stereotypes/personal traits and the combined index are not comparable to the stereotype-based and combined indices constructed in March 2005. The questions on stereotypes are phrased differently for the two surveys. In addition, responses to the probes on personal traits were not used in the March 2005 stereotype-based index because of the large 'can't say' responses.

The proximity-based indices are comparable, however, as the same questions were used in the 2005 and 2006 surveys. Results indicate that more Filipinos are biased against Muslims as reflected in their hiring and leasing preferences. The percentage of Filipinos manifesting bias increased by 19 percentage points (from 35% to 54%) since March 2005 [Table 9]. This could be a reflection of increasing Muslim-Christian tensions worldwide. In particular, the increase in anti-Muslim bias among Filipinos could be in response to the violent reactions of Islam fundamentalists worldwide to statements made by Pope Benedict XVI in a lecture delivered in Germany in September 2006. The Pope had quoted a 14th-century Byzantine emperor who made some uncomplimentary observations on Islam. Increased bias among Filipinos may also be in response to news of the maltreatment of some Filipino OFWs at the hands of their Lebanese employers at the height of the Israel-Lebanon war which began in July 2006.

IV. CONCLUSION

Bias against Muslims appears to have increased among non-Muslim Filipinos since March 2005. Depending on the index used, from 42% to 54% of non-Muslim Filipinos now appear to be biased against Muslims, as against 35% to 43% in March 2005. No local event, such as a bombing or kidnapping incident, appears to have triggered this increase; no such incident occurred in the quarter preceding the survey. Moreover, the percentage of non-Muslims who have had direct dealings with Muslims (19%) has not changed between the two survey periods. Rather the rise in anti-Muslim bias appears to reflect increasing tensions between Muslims and Christians worldwide, and in particular, appears to be in response to hostile Muslim reactions to statements made by Pope Benedict XVI a month before the survey period.

Bias against Muslims is strongly reflected in the hiring and leasing preferences of non-Muslim Filipinos. These preferences in turn are shaped by perceptions of Muslims, specifically the perception of their trustworthiness. Those who tend to view Muslims as untrustworthy also tend to be biased towards hiring or leasing out to Christians and to renting in predominantly Christian neighborhoods.

The survey findings also point to regional differences, with NCR being more prone to proximity bias, and Visayans and Mindanaoans being more prone to stereotype bias. Results also indicate that among Visayans, anti-Muslim bias is stronger among Cebuanos.

The study further shows that source of information has an impact on tendency to bias, with radio having a contributory effect to bias. Experience with Muslims, on the other hand, serves to lessen proximity bias. There are also indications that bias increases with age.

Moreover, there are indications that anti-Muslim bias colors perception of what constitutes the effective approach to achieving lasting peace in Mindanao. Those with anti-Muslim bias tend to favor the military solution. Nevertheless, despite the sizeable percentage of Filipinos having anti-Muslim bias, a majority thinks that addressing poverty is the way to achieve lasting peace in Mindanao.

**PERCEIVED URGENCY OF
SELECTED NATIONAL ISSUES AND
THE NATIONAL ADMINISTRATION'S
PERFORMANCE RATINGS**

Table B-1
PERCEIVED URGENCY OF SELECTED NATIONAL ISSUES AND
THE NATIONAL ADMINISTRATION'S PERFORMANCE RATINGS

October 21 - November 8, 2006 / Philippines

(Row Percent)

National issues	% citing as One of Three Most Urgent Issues	Approve	Undecided	Disapprove	NAR*
Encouraging new investment to provide more jobs	---	33	36	31	+ 2
Increasing peace in the country	20	28	41	31	- 3
Providing access to affordable and dependable electric power	---	30	35	35	- 5
Stopping the widespread destruction and abuse of our environment	14	26	41	33	- 7
Curbing widespread criminality	21	28	32	40	- 12
Economic recovery	33	25	36	39	- 14
Restoring the people's trust in the government and its officials	10	19	43	37	- 18
Eradicating illegal political killings	---	22	35	43	- 21
Increasing the pay of workers	47	25	26	50	- 25
Reducing the great poverty of many Filipinos	38	20	33	47	- 27
Eradicating graft and corruption in government	30	21	30	49	- 28
Controlling inflation	54	21	27	53	- 32

Q77 - 88. Nais naming malaman ang inyong opinyon tungkol sa pagganap sa tungkulin ng administrasyon ni Presidente Arroyo sa pagharap nito sa mga sumusunod na isyung pambansa. Sa bawat isyung mabanggit, sa pamamagitan po ng board na ito (SHOW RATING BOARD), maaari bang pakisabi ninyo kung kayo ay TALAGANG APROBADO, APROBADO, MAAARING APROBADO AT MAAARING HINDI APROBADO, HINDI APROBADO o TALAGANG HINDI APROBADO sa pagganap sa tungkulin ng pambansang administrasyon sa mga isyu na ito?

Notes: (1) % Approve = % Truly Approve plus % Somewhat Approve; % Disapprove = % Somewhat Disapprove plus % Truly Disapprove.

(2) *NAR (Net Approval Rating) = %Approve minus % Disapprove

(3) Figures may not add up to 100% due to rounding off or to Don't Know and Refuse responses.

Q84. Nais naming malaman ang inyong opinyon tungkol sa pagganap sa tungkulin ng administrasyon ni Presidente Arroyo sa pagharap nito sa mga sumusunod na isyung pambansa. Sa bawat isyung mabanggit, maaari bang pakisabi ninyo kung kayo a TALAGANG APROBADO, APROBADO, MAAARING APROBADO AT MAAARING HINDI APROBADO, HINDI APROBADO o TALAGANG HINDI APROBADO sa pagganap sa tungkulin ng pambansang administrasyon sa mga isyu na ito?
 -pagpapalaganap ng kapayapaan sa bansa

Note: (1) % Approve = % Truly Approve plus % Somewhat Approve; % Disapprove = % Somewhat Disapprove plus % Truly Disapprc
 (2) Figures may not add up to 100% due to rounding off or to Don't Know and Refuse responses.

Question: Halimbawa ay may dalawang binatang aplikante para sa isang posisyon sa fast food restaurant. Pareho silang nakapagtapos ng 3rd year college, parehong kwalipikado, at parehong nagbabalak magtrabaho para makaipon ng pang matrikula. Kung kayo ang mamimili, sino sa kanila ang inyong pipiliin?

Question: Halimbawa ay nangangailangan ang pamilya ninyo ng isang lugar na titirhan at nakakita kayo ng dalawang posibleng mauupahan. Pareho ang kanilang sukat, bilang ng kwarto at distansya sa inyong pinagtatrabahuhan at eskwelahan ng mga bata. Higit na mura ang upa ng isa ngunit mas malapit sa komunidad ng mga Muslim. Alin sa dalawa ang inyong pipiliin?

**PULSE ASIA'S NOVEMBER 2006
ULAT NG BAYAN SURVEY QUESTIONNAIRE
(MODULE FOR HUMAN DEVELOPMENT NETWORK)**

EMBARGOED ITEMS:**P. GROUP ASSOCIATED WITH THE WORD "TERRORISM" (UNAIDED RECALL)**

140. Anong grupo ang unang pumapasok sa inyong isipan kapag narinig ninyo ang salitang **TERORISMO**? **ONE ANSWER ONLY**
(*What group comes first to your mind when you hear the word **TERRORISM**?*)

Verbatim:

T. MUSLIM CONCERNS

151. Ipagpalagay nating may dalawang taong gustong umupa ng bakanteng kwarto sa inyong bahay. Kung mamimili kayo sa kanilang dalawa nang hindi pa ninyo sila nakikita o nakikilala, sino sa dalawa ang mas malamang ninyong pipiliin?
(*Suppose that there are two people applying to rent the empty room in your home. If you had to choose without the opportunity of ever meeting them which one are you more likely to choose?*) **SHOWCARD**

ROGELIO SANTOS 1
MOHAMMAD UMPA 2
KAHIT SINO SA KANILANG DALAWA (*Either will do*)..... 3

152. Halimbawa pinadalhan kayo ng ahensya ng aplikasyon ng dalawang tao para maging kasambahay o katulong ninyo. Pareho silang 21 anyos at parehong may dalawang taong karanasan. Kung mamimili kayo sa kanilang dalawa nang hindi pa ninyo sila nakikita, sino sa dalawa ang inyong pipiliin?
(*Suppose the agency sends you the applications of two people to be your domestic helper. Both are 21 years old and have 2 years experience. If you had to choose without the opportunity of meeting them, whom would you choose?*) **SHOWCARD**

JULIE CRUZ 1
FATIMA SALIK 2
KAHIT SINO SA KANILANG DALAWA (*Either will do*)..... 3

153. Halimbawa ay may dalawang binatang aplikante para sa isang posisyon sa fast food restaurant. Pareho silang nakapagtapos ng 3rd year college, parehong kwalipikado, at parehong nagbabalak magtrabaho para makaipon ng pang matrikula. Kung kayo ang mamimili, sino sa kanila ang inyong pipiliin?
(*Suppose that two young men applied for the one position open at a fast food restaurant. Both have finished 3rd year college, are equally qualified, and intend to work in order to earn money for tuition. Who would you choose?*) **SHOWCARD**

ABU HASSIN MALIK 1
DANILO DE LOS REYES 2
KAHIT SINO SA KANILANG DALAWA (*Either will do*)..... 3

T. MUSLIM CONCERNS (cont'd)

154. Halimbawa ay nangangailangan ang pamilya ninyo ng isang lugar na titirhan at nakakita kayo ng dalawang posibleng mauupahan. Pareho ang kanilang sukat, bilang ng kwarto at distansya sa inyong pinagtatrabahuhan at eskwelahan ng mga bata. Pareho rin ang upa pero ang isa ay mas malapit sa komunidad ng mga Muslim. Alin sa dalawa ang inyong pipiliin?
(Suppose your family needs a place to live and you have found two houses for rent. They are of the same rental price, of the same size, have the same number of rooms, and are of the same distance from your office/schools. The rent is also the same but one is closer to a Muslim community. Which of the two would you choose?)

- MALAPIT SA KOMUNIDAD NG MUSLIM (*Closer to Muslim community*)1
 MALAYO SA KOMUNIDAD NG MGA MUSLIM (*Farther from Muslim community*)2
 KAHIT ALIN SA DALAWA (*Either of the two*)3

BABASAHIN NAMIN NGAYON SA INYO ANG ILANG MGA PANGUNGUSAP NA NAGPAPAHAYAG NG IBA'T IBANG OPINYON NA MAAARING MAYROON ANG ILANG TAO TUNGKOL SA MGA FILIPINONG MUSLIM. SA BAWAT ISA SA MGA PANGUNGUSAP NA ITO AY PAKISABI LAMANG KUNG MALAMANG NA TOTOO ITO O MALAMANG NA HINDI ITO TOTOO.
(We will now read some statements to you expressing different opinions about Filipino Muslims that some people may have. To each of these statements, would you please say whether that statement is probably true or probably false.)

(SHUFFLE CARDS – RATING BOARD 5) SPLIT SAMPLE		PROBABLY TRUE	PROBABLY FALSE	DON'T KNOW	REF
155.	() a. ANG MGA MUSLIM AY MAS MADALING MAGHURAMENTADO <i>(Muslims are more prone to run amok)</i>	1	2	8	9

APPENDIX B:
PROJECT UBNOV2006
TECHNICAL DETAILS

A. LOCATION & FIELDWORK SCHEDULE

National Capital Region	-	October 21 - November 8, 2006
Balance Luzon	-	October 21 - October 31, 2006
Visayas	-	October 24 - November 6, 2006
Mindanao	-	October 22 - November 6, 2006

B. RESPONDENTS

Respondents for the survey were 1,200 voting-age adults (18 years old and above) through face-to-face interviews. The questionnaire includes items on current political, social and economic issues as well as personal and household information.

C. SAMPLING METHOD

Sample sizes and Error Margins

Below is the distribution of the sample by area and the corresponding error margin at the 95% confidence level.

	Sample Size	Error Margin
Philippines	1,200	+/-3%
National Capital Region	300	+/-6%
Balance Luzon	300	+/-6%
Visayas	300	+/-6%
Mindanao	300	+/-6%

Sampling Scheme

The sample size for each of the four study areas is 300 voting-age adults. Multi-stage probability sampling was used in the selection of sample spots and the allocation of sample units in each stage is as follows:

	Sample Municipalities	Sample Spots	Probability Respondents
National Capital Region	17	60	300
Balance Luzon	15	60	300
Visayas	15	60	300
Mindanao	15	60	300

For the National Capital Region:

Stage 1: Selection of Sample Precincts

Sixty (60) precincts were distributed among the 17 cities and municipalities in such a way that each city/municipality is assigned a number of precincts that is roughly proportional to its population size. An at least additional provision is that each municipality must receive one precinct. Precincts were then selected at random from within each city/municipality.

Stage 2: Selection of Sample Households

In each sample precinct map, interval sampling was used to draw 5 sample households. A starting street corner was drawn at random. The first sample household was randomly selected from the households nearest to the starting street corner. Subsequent sample households were chosen using a fixed interval of 6 households in between the sampled ones; i.e., every 7th household was sampled.

Stage 3: Selection of the Sample Adult

In each selected household, a respondent was randomly chosen among household members who are 18 years of age and older, using a probability selection table. To ensure that half of the respondents are males and half are females, only male family members were pre-listed in the probability selection table of odd-numbered questionnaires while only female members were pre-listed for even-numbered questionnaires. In cases where there were no qualified respondent of a given gender, the interval sampling of household continued until five sample respondents were identified.

For the rest of the Philippines:

Stage 1: Selection of Sample Cities/Municipalities

Within each study area, 15 cities/municipalities were selected without replacement and with probability proportional to population size.

Stage 2: Selection of Sample Spots

Once the cities/municipalities have been selected, 60 spots were distributed among the sample cities/municipalities in such a way that each city/municipality was assigned a number of spots roughly proportional to its population size. However, each municipality must receive at least one spot.

If based on the latest National Statistics Office categorization (1990), the chosen sample city/municipality is 100% urban, then sample precincts were systematically drawn from the city/municipality. Otherwise, sample barangays within each sample city/municipality were selected with equal probabilities.

Stage 3: Selection of Sample Households

Within each sample spot, five households were established by systematic sampling. In sample (urban) precincts, a random corner was identified; a random start generated; and the interval was six. In rural barangays, the designated starting point was either a school, the barangay captain's house, a church/ chapel, or a barangay/ municipal hall.

Stage 4: Selection of the Sample Adult

In each selected household, a respondent was randomly chosen among household members who are 18 years of age and older, using a probability selection table. To ensure that half of the respondents are males and half are females, only male family members were pre-listed in the probability selection table of odd-numbered questionnaires while only female members were pre-listed for even-numbered questionnaires.

D. RESEARCH METHODOLOGY

1. Preparation

a. Questionnaire

The Filipino version of the questionnaire was translated into Bicolano, Cebuano, English, Ilocano, Ilonggo by language experts. Each language translation was translated back to Filipino by another set of experts to make sure that the messages were conveyed accurately.

b. Training

Training was conducted in 4 central locations: Quezon City, Cebu City, Iloilo City and Davao City. The interviewers who covered Luzon were trained in Quezon City. Those trained in Iloilo City covered Ilonggo-speaking regions while those trained in Cebu City covered all of Cebuano-speaking areas (Central and Eastern Visayas and Mindanao).

Training activities mainly consisted of one or two days office training to learn the basics of the project.

2. Supervision

a. Supervisors

Supervisors reporting to the field manager monitored the study full-time. They observed interviewers (at least 10% of total were observed by supervisors), followed-up and did surprise checks on the field interviewers. They also ensured that field logistics were received promptly and administered properly.

2. Supervision (cont'd)

b. Spot Checking

Spot checking was done at various stages of fieldwork. The first one took place after about 30% of interviews were completed. The second spot-checking was conducted after 60% completion and the last one, immediately after 90% completion of interviewing.

During spot-checking, at least 20% of the unsupervised interviews were re-interviewed/back-checked. If serious errors persisted after 20% spot-checking, the original interviews were invalidated and respondents re-interviewed. An error was considered serious if dishonesty in recording was apparent or if there was a serious misinterpretation of the study that it resulted in the wrong information.

If some questionnaires were found incomplete or had inconsistent answers, the interviewer was asked to go back to the respondent, so that the questionnaire could be completed and corrected.

c. Numbers of Calls and Substitution

A respondent not contacted during the first attempt was visited for a second time. If the respondent remained unavailable, a substitute who possessed the same qualities (in terms of gender, age bracket, and socio-economic class) as the original respondent was interviewed. The substitute respondent was taken from another household beyond the covered intervals in the sample precinct/barangay.

d. Field Editing

After each interview, the interviewer was asked to go over her own work and check for consistency. All accomplished interview schedules were submitted to the assigned group supervisor who, in turn, edit every interview.

3. Data Processing

An office editor conducted a final consistency check on all interviews prior to coding. Interview sheets were edited/checked twice by office editors before the information were encoded. A data entry computer program verified and checked the consistency of the encoded data before data tables were generated.

E. WEIGHTING PROCEDURE

To yield representative figures at the national level, census-based population weights were applied to the various area domains. Appropriate projection factors were applied so that original population proportions are reflected in the data tables using this formula:

$$\text{Projection Factors (weights)} = \frac{\text{Population}}{\text{No. of Interviews}}$$

For questions answered by the sample voting age adult, the following projection factors were used:

	2005 NSO Projected Population* (Aged 18 & above)			Total Sample Size		Projection Factor for Probability Respondent	
	TOTAL	URBAN	RURAL	URBAN	RURAL	URBAN	RURAL
Philippines	47,765,309	24,333,982	23,431,327	860	340		
NCR	6,993,210	6,993,210	----	300	---	23.3107	---
Balance Luzon	20,256,744	9,358,747	10,897,997	245	55	38.1990	198.1454
Visayas	9,587,143	3,661,373	5,925,771	235	65	15.5803	91.1657
Mindanao	10,928,212	4,320,654	6,607,559	80	220	54.0082	30.0344

For questions regarding the household members, the following projection factors were used:

	2005 NSO Projected Population* (Total Households)			Total Sample Size		Projection Factor for Households	
	TOTAL	URBAN	RURAL	URBAN	RURAL	URBAN	RURAL
Philippines	84,241,375	41,139,313	43,102,062	5,903	1,616		
NCR	11,240,743	11,240,743	---	1,517	---	7.4099	---
Balance Luzon	35,607,663	16,010,506	19,597,157	1,227	248	13.0485	79.0208
Visayas	17,103,869	6,216,239	10,887,630	1,141	284	5.4480	38.3367
Mindanao	20,289,100	7,671,826	12,617,274	404	1,084	19.0841	11.6396

For questions regarding the household, the following projection factors were used:

	2005 NSO Projected Population* (Total Households)			Total Sample Size		Projection Factor for Households	
	TOTAL	URBAN	RURAL	URBAN	RURAL	URBAN	RURAL
Philippines	16,825,969	8,545,075	8,280,893	860	340		
NCR	2,413,918	2,413,918	---	300	---	8.0464	---
Balance Luzon	7,133,171	3,298,428	3,834,743	245	55	13.4630	69.7226
Visayas	3,371,177	1,287,753	2,083,424	235	65	5.4798	32.0527
Mindanao	3,907,703	1,544,976	2,362,726	80	220	19.3122	10.7397

APPENDIX C: COMPARATIVE ERROR MARGINS FOR SPECIFIC SAMPLE SIZES

Formula for the computation of the error margin of a proportion:

$$\text{error margin} = \pm 1.96 * \sqrt{\frac{p(1-p)}{n}}$$

where

1.96 = Z-value for large population of data at 95% level of confidence

p = proportion

n = sample size

Note: Error margins are symmetric toward $p = 0.5$ or 50%. p and $1-p$ have the same margins of error.

Proportion	Sample Sizes											
	100	200	300	400	500	600	700	800	900	1000	1100	1200
100	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
1 99	2.0	1.4	1.1	1.0	0.9	0.8	0.7	0.7	0.7	0.6	0.6	0.6
2 98	2.7	1.9	1.6	1.4	1.2	1.1	1.0	1.0	0.9	0.9	0.8	0.8
