- (ii) Further, in the event of any deviations, a review and rebalancing of the asset allocation will be called for by the Investment Manager within 30 days from the date of the said deviation. Such changes in the investment pattern will be for a short term and for defensive considerations and the intention being at all times to seek to protect the interests of the Unit Holders and may be caused due to reason such as non - availability of the appropriate assets as mentioned in the above asset allocation matrix or due to perceived weakness in the credit worthiness of the issuer of the assets which are held in the portfolio during the tenor of the Scheme.

Credit Evaluation Policy

Credit Analysis at DSPBRIM is an independent function performed by the Risk & Quantitative Analysis (RQA) team. The RQA team sets up and monitors lending limits for each debt issuer. Issuer risk limits cover the quantum of exposure, maximum tenor and in some instances the type of instruments that can be purchased by the Investment Manager. An individual scheme's access to the issuer limit is dependent on its investment objectives, regulatory restrictions and assets under management. Risk limits for issuers are assigned and reviewed regularly at an internal Credit Committee meeting.

Credit evaluation process: The credit evaluation process includes a thorough analysis of the operating and financial strength of the issuer as well as management and industry risk evaluation. Typically, an interaction with the company management is also sought prior to setting up of issuer limits.

For structured obligations, in addition to the above, the evaluation also covers originator analysis, collateral analysis, structure analysis and embedded risk analysis.

Each credit proposal is discussed by an internal Credit Committee and a limit is assigned, if the issuer/structure is suitable.

Sectors in which the Schemes shall not invest

The Schemes shall not invest in debt issued by real estate, air lines and micro finance companies.

Typically, the RQA team identifies sectors which are deemed vulnerable at any given point of time depending on the macro environment and avoids exposure to such sectors. Thus, sector restrictions may be temporary and may change in different environments.

	The Schemes shall not invest in securitized debt, fixed income derivatives instruments and in foreign debt securities.	
Investment Strategy	The Investment Manager will invest only in those securities that are rated A1+ by a domestic credit rating agency authorised to carry out such activity, such as CRISIL, ICRA, CARE etc. Since the Schemes will invest only in bank CDs, CBLO, repo, government securities or treasury bills, credit risk is expected to be low. The Scheme will invest only in such securities which mature on or before the scheduled maturity date.	
Risk Profile	Mutual Fund Units involve investment risks including the possible loss of principal. Scheme specific risk factors are summarized below: Market Risk (ii) Credit Rating Risk (iii) Liquidity Risk (iv) Credit Risk (v) Re-investment Risk (vi) Interest Rate Risk (vii) Concentration Risks (viii) Risk associated with Listing of Units and Risk associated with close ended schemes.	
Risk Management Strategies	Risk	Risk mitigants / management strategy
	<u>Interest rate risk</u> Fall in the value of the portfolio due to upward movement of interest rates	Although this risk exists in a fixed income portfolio, the closed ended nature of the Scheme mitigates the risk as portfolio construction at the time of inception leads to creation of a short duration portfolio with securities whose maturity date is in line with the maturity date of the Scheme. Given the short duration of securities in the portfolio, interest rate risk is anticipated to be low.
	<u>Credit risk</u> Issuer's inability to meet interest and principal payments on its debt obligations	Credit risk management is an independent function performed by the Risk Management team. The team establishes and continuously monitors credit limits for each issuer based on inputs from issuer financial statements, rating agencies etc. Issuer Risk Limits are imposed on a single issuer as well as an industrial group, for all the schemes. Issuer risk limits cover the quantum of exposure, maximum tenor and in some instances the type of instruments that can be purchased. Risk limits for issuers are assigned after discussion at an internal Credit Committee meeting. The endeavour is to construct a portfolio with high credit quality. Apart from securities issued by Government of India, reverse repurchase agreements (repo) and Collateralised Borrowing and Lending Obligation (CBLO), the Schemes would invest only in Bank Certificates of Deposits (CD). Given the strong credit profiles of scheduled commercial banks, credit risk for the schemes is expected to be low.
	<u>Liquidity risk</u> High impact costs for liquidation of securities held in the portfolio	In a closed ended product, liquidity risk on account of underlying securities' market liquidity does not exist as intermediate liquidity is not required. Liquidity access is done through contractual maturity of the security, which is in line with the term of the closed ended Scheme.
	<u>Concentration risk</u> Concentrated investment in single security or single issuer	We have internal fund manager guidelines for maximum exposure to a single issuer and also concentration limits on account of large holdings to avoid undue concentration in portfolio.
	<u>Event risk</u> Price risk due to company or sector specific event	The endeavour is to invest in securities of issuers, which have high balance sheet strength in the investment horizon to eliminate single company risk.
