Complete Questions 1-5, and provide all data and information for the proposed facility, as requested in Technical Specifications, Items 1-13.

Pre-Transition Certification Checklist: An application concerning a pre-transition channel must complete questions 1(a)-(c), and 2-5. A correct answer of "Yes" to all of the questions will ensure an expeditious grant of a construction permit application to change pre-transition facilities. However, if the proposed facility is located within the Canadian or Mexican borders, coordination of the proposal under the appropriate treaties may be required prior to grant of the application. An answer of "No" will require additional evaluation of the applicable information in this form before a construction permit can be granted.

Post-Transition Expedited Processing. An application concerning a post-transition channel must complete questions 1(a), (d)-(e), and 2-5. A station applying for a construction permit to build its post-transition channel will receive expedited processing if its application (1) does not seek to expand the noise-limited service contour in any direction beyond that established by Appendix B of the Seventh Report and Order in MB Docket No. 87-268 establishing the new DTV Table of Allotments in 47 C.F.R. § 73.622(i) ("new DTV Table Appendix B"); (2) specifies facilities that match or closely approximate those defined in the new DTV Table Appendix B facilities; and (3) is filed within 45 days of the effective date of Section 73.616 of the rules adopted in the Report and Order in the Third DTV Periodic Review proceeding, MB Docket No. 07-91.

- (a) It will operate on the DTV channel for this station as established in 47 C.F.R. Section 73.622. Yes No
 - (b) It will operate a pre-transition facility from a transmitting antenna located within 5.0 km (3.1 miles) of the DTV reference site for this station as established in 47 C.F.R. Section 73.622. Yes No
 - (c) It will operate a pre-transition facility with an effective radiated power (ERP) and antenna height above average terrain (HAAT) that do not exceed the DTV reference ERP and HAAT for this station as established in 47 C.F.R. Section 73.622. Yes No
 - (d) It will operate at post-transition facilities that do not expand the noise-limited service contour in any direction beyond that established by Appendix B of the Seventh Report and Order in MB Docket No. 87-268 establishing the new DTV Table of Allotments in 47 C.F.R. § 73.622(i) ("new DTV Yes No

2.	The proposed facility will not have a significant environmental impact, including exposure of workers or the general public to levels of RF radiation exceeding the applicable health and safety guidelines, and therefore will not come within 47 C.F.R. Section 1.1307. Applicant must submit the Exhibit called for in Item 13.	<input checked="" type="radio"/> Yes <input type="radio"/> No

5.	The antenna structure to be used by this facility has been registered by the Commission and will not require registration to support the proposed antenna, OR the FAA has previously determined that the proposed structure will not adversely effect safety in air navigation and this structure qualifies for later registration under the Commission's phased registration plan, OR the proposed installation on this structure does not require notification to the FAA pursuant to 47 C.F.R. Section 17.7.	<input checked="" type="radio"/> Yes <input type="radio"/> No

R.F. RADIATION COMPLIANCE STATEMENT
Channel 21 – 100 kW H DA
Shenandoah Valley Educational TV Corp

October 15, 2008

The WVPY-DT transmitter site is located atop Signal Knob. There are only two transmitters at this site, WVPY-DT and WVPY-TV. The analog TV station will cease operation as required on February 17, 2009. The site, fenced, gated and locked has warning signs posted making it a "controlled environment."

Based on the formulas expressed in the OET Bulletin, No. 65, August 1997, "Evaluating Compliance with F.C.C. Guidelines for Human Exposure to Radio frequency Electromagnetic Fields", published by the Federal Communication Commission's Office of Science and Engineering, the applicant proposes to operate WVPY-DT on its assigned channel of channel 21 with its current high-gain directional antenna and with the newly increased ERP of 100 kW. This station operates from an antenna mounted at 26 meters above the ground. At head height when assuming a vertical elevation field of 0.1 toward the nadir, this station produces a power density of 58.0 microwatts per square centimeter, which is 3.4 percent of the 1,716.7 microwatts per square centimeter maximum for the frequency in use.

Until the transition to digital television is complete analog WVPY-TV, on channel 42, will operate using its licensed 141 kW H visual power with its directional antenna of 27 meters above ground. Assuming the maximum 22% aural injection, the station is predicted to produce a maximum R.F. non-ionization radiation level at a position 25 feet (head height) above the tower base of 46.7 microwatts per square centimeter. Since the applicant proposes a high gain UHF antenna, a vertical elevation field of 0.1 toward the nadir was also used in this calculation. For a controlled environment, 46.7 microwatts per square centimeter amounts to only 2.19 percent of the maximum for the frequency in use of 2,136.7 microwatts per square centimeter.

Together, the common facilities produce a total of 5.59 percent of the maximum for a controlled environment. Consequently, the proposed facility complies with the Commission's Rules with regard to protection of workers and the general public from non-ionization radio frequency radiation

The applicant will protect workers on the tower by either reducing ERP or terminating transmission. An agreement is in effect with the users at this location to reduce power or to terminate operations to protect workers from receiving in excess of the Commission's standard.
